Storm Drain Marking Program

Montgomery County Department of Transportation

Effective 3/1/2010

KEEP MONTGOMERY COUNTY BEAUTIFUL PROGRAM

STORM DRAIN MARKING PROGRAM - FOR MONTGOMERY COUNTY

Storm drains are located throughout the Chesapeake Bay Watershed, including Montgomery County. When it rains, the water that runs down along the gutters on our street “disappears” down the storm drains.

Have you ever stopped to wonder where all the water goes? It does not go to a wastewater treatment plant. Therefore nothing is removed from the water. Anything that goes into your storm drain goes directly into our local stream, which feeds into a river and eventually empties into the Chesapeake Bay.

Your neighborhood stream is linked to the Chesapeake Bay. You can help protect the Bay by applying plastic markers with the words “No Dumping” on storm drains in your neighborhood. This message will help members of our community remember that nothing but rainwater should enter the storm drains. Civic associations, organizations, and residents can help spread the word: storm drains are not trash cans!

This application will get you started. Follow the guidelines to make your project a success! For questions, contact the MCDOT Community Outreach office at 240-777-7155.

Prior to Marking:

Please Note: Marking can only be done in 60 degree or warmer weather. The glue will not adhere in colder weather.

- A. Return application before project is to begin with the following information:**
- The neighborhood in which you want to work;
 - Who is doing the project; and
 - Who will provide supervision.
- B. Inform your civic/homeowner official and ask for their support and approval. Provide the following information:**
- Purpose of project;
 - Dates of project, with a rain date; and
 - A contact person for residents who have questions.

****Ask residents to move cars blocking storm drains****

ITEMS TYPICALLY PLACED IN STORM DRAINS

MOTOR OIL

Problem: When poured down the gutter or storm drain, motor oil travels to your local stream where it damages or kills underwater vegetation and aquatic life. One quart of oil can contaminate up to two million gallons of drinking water or create an eight-acre oil slick.

Solution: Put used motor oil in a sturdy container, such as a plastic milk jug, and take it to the nearest collection center. To find the collection center nearest you, call the Maryland Environmental Service at 1-800-492-9188 or contact the Division of Solid Waste Services at 240-777-6410.

ANTI-FREEZE

Problem: Anti-freeze is a highly toxic chemical. It is poisonous to people, as well as fish, birds, and pets.

Solution: Ask your local service station to add it to their anti-freeze storage drum or residents may bring up to 5 gallons of antifreeze to the Montgomery County Transfer Station. Remember not to mix your anti-freeze with any other substance!

PAINT

Problem: Many paint products harm people, animals, and the environment when improperly used or disposed of.

Solution: Donate paint (but not lead paint!) to community groups, schools, local theaters, or other interested organizations. For small quantities of latex or oil-based paints, stuff the can loosely with newspaper, allow it to dry, reseal and discard in trash. Drop off at appropriate hazardous waste sites on designated days. For additional information call the Department of Environmental Protection, Division of Solid Waste Services at 240-777-6410 or www.montgomerycountymd.gov/solidwaste.

YARD TRIM

Problem: When left in the gutter or dumped into storm drains, yard wastes travel directly to the Bay. Once in the water, yard wastes decompose rapidly, adding excessive nutrients to the Bay, which are detrimental to Bay wildlife. Yard trimmings also clog storm drains, rendering them ineffective and causing localized flooding.

Solution: Instead of throwing your yard clippings away, compost them and use to condition your soil. Check gardening books to learn how to compost or call the Division of Solid Waste at (240) 777-6410 or visit their website at www.montgomerycountymd.gov/solidwaste.

PLASTICS

Problem: Plastic and foam containers wash into storm drains and into the Bay. They do not decompose. Plastics kill wildlife when eaten by animals or when they become entangled in them.

Solution: Minimize your use of these products and make sure that the plastics you do use get put in the trash. If you see plastic litter, pick it up so that it does not get washed or blown into the storm drain, gutter, or local stream.

STORM DRAIN MARKERS CHECKLIST & SIGN-OUT LOG

WE SUPPLY:

The Storm Drain Marking Kit for Montgomery County:

- _____ Storm Drain Markers that say: "DO NOT POLLUTE! — DRAINS TO YOUR CREEK"
- _____ Tubes of Adhesive (1 per 12 markers)
- _____ Latex Gloves (2 pairs, if available)
- _____ Wire Brush (1 or 2)
- _____ Instructions on how to mount the markers
- _____ Door Hangers (if requested)

WHAT YOU SUPPLY:

- The application and permission slip filled out completely and signature of civic/homeowner official
- Rags to remove excess adhesive
- Volunteer Labor
- Commitment to return wire brush within four weeks after check-out (complete sign out log below)
